## ACADEMIC PROJECTS:

- **Daisy Chain** - An interactive app to connect parents and pre-school: Building a prototype to understand human computer interaction and to develop an app using these techniques to make the interaction between human and a system easier. An app to make interaction between parents and preschool teachers to get an update about their children. Developed wireframes, storyboards as per the project and built a prototype of the same in the form of a mobile application using proto.io.
- **Art for You** - A website where buyers can buy the paintings that they wish to. A variety of themes were presented from which they can add to favourites or cart and finally buy them. People can also upload their paintings for sale on this website.
- **Hotel booking website** - A website where users can book hotel room of a hotel. Fully functional website created using HTML5, CSS3 for front end, JSP, Servlets and MySQL as the database. Users can choose the check in and checkout date and book the room of their choice.
- **Jigsaw Puzzle** - A tablet game application for playing jigsaw puzzle created using Balsamiq and Axure. Initial sketches and paper prototypes were created, and these were implemented on Balsamiq and Axure tools.
- **MakerNet** - A website used to connect the makers to the market, reserve space for projects, upload and share project ideas through images and files, creating and managing events in the makerspace and view the gallery to see the current and future projects. Created using Bootstrap, AngularJS, NodeJS and Firebase for database as a complete full stack project.
- **Song-Lyric library** - A project in Database where the songs, albums, artists and genre were created and accessed using a simple front end created using PHP. A user can search the songs based on genre, artist and album and contribute to the website by giving rating to songs and adding lyrics to the songs.
- **Website to connect students and extra-curricular departments in the university** - Creating and managing the plan to build this website within the time frame and the cost associated. The management tool used was MS Project.
